First case of coronary infection in Norway

Norway has few say the first case of coronasia e. The woman lives in Tromsø, informs Public Health Institute et. - It is very unlikely that she has forged someone else, says municipal superior in Tromsø.

- There is a person who has confirmed a weak positive test result. This the people are in Tromsø. She came here from China, says Kathrine Kristoffersen, who is a municipal superintendent in Tromsø

The woman has been in quarantine since she came to Norway. According to the Public Health Institute, the woman came Norway last weekend. The answer to the test came today.

The superior says that the municipality has a pandemic plan and that they have over the past few weeks prepared for a possible event.
Si is alone in quarantine

She says this person was tested because he came from an area in China where it was many forges.

- It was discovered because there are routines for testing people who come to the country from areas where it is great forging spread.

The woman is alone in the home quarantine in her own apartment now.

- She's in good courage. There is little risk of them spreading locally, says Kristoffersen.

The municipal forges general practitioner are in daily contact with the woman by telephone.

The Public Health Institute also considers it very unlikely that she poses a risk of forging others.

Increasing probability of forging spreading

On the basis of a principle, the detection of possible contacts was carried out.

- It is very unlikely that they have forged someone else, says Vold.
She says that the likelihood of getting a forge in Norway is increasing and increasing spreads to several countries.

Line Vold in FHI says they assist Tromsø municipality in this matter.

The municipal superintendent in Tromsø was asked if the woman could have forged someone on the journey home from China. Kathrine Kristoffersen that individual assessments are made by persons who he has been in contact with.

- There will be direct contact with those who may be affected, she says.

The Minister of Health is expecting a major outbreak

Health Minister Bent Høie is briefed on the situation. He tells NRK that message about it forging did not come as a surprise.

- They are, as expected, and as we have said for a long time; that we will get people who are forged Norway.

Høie says it is expected that there will be a bigger outbreak in Norway now that the virus is spreading outside of China.

- Norway must be prepared for more forges and for the same development as we do look in Italy now.

WHO with advice to Norway

Dr. Margaret Harris of the World Health Organization told NRK on Wednesday afternoon that it is important Norway to be prepared when forging one comes to the country.

- Be prepared. Be prepared yesterday! Plan which health care provider will take care of the sick, who will take care of all the others. Those with heart problems and other diseases are coming also to need help, even if there is coronasm in the country, she said.

Harris also recalled the importance of giving people information.

- If some areas are said in quarantine, people must know how to get food and another help, how to teach the children, for example, said the experienced doctor.

- Don't go to the doctor
Harris had the advice to people who feel sick:

- Don't go to the hospital. Don't go to your doctor. Know what to do to get care. Informer health authorities and quarantine yourself.

She said most patients do not become seriously ill, but reminded that they can forge others as well can get very sick.
